

# Health and Safety Policy

Owner: Operations | Version: 3.0-rag | Effective date: 2026-04-20

|                   |                                                     |
|-------------------|-----------------------------------------------------|
| Document type     | Synthetic policy manual                             |
| Use case          | RAG training, retrieval benchmarking, QA evaluation |
| Chunking guidance | Use one chunk per section and preserve section IDs  |

## 1. Purpose and Scope

Health and Safety Policy describes the formal policy requirements and operating procedures used by Northstar Analytics Ltd.. It is written as a synthetic but realistic document for training retrieval, summarization, and question-answering systems.

This document applies to all employees, interns, temporary workers, and approved contractors unless a section explicitly states otherwise.

Managers are responsible for enforcing this policy consistently and for escalating unusual cases to the document owner.

## 2. Roles and Responsibilities

Employees must read, understand, and follow the policy requirements relevant to their role.

Managers must document exceptions in writing and retain approvals in the designated system of record.

The document owner reviews this policy at least annually and whenever business, legal, or technical requirements materially change.

## 3. Hazard Reporting

The section on hazard reporting defines the standard rule, the approval path, and the records that must be retained.

Requests related to hazard reporting should be submitted through the official workflow rather than handled informally through chat or email alone.

When a manager grants an exception for hazard reporting, the exception must include the reason, the duration, and any compensating controls.

Records related to hazard reporting must be stored in the designated repository with a clear owner and retention period.

Metrics related to hazard reporting should be reviewed periodically to identify recurring issues and opportunities for improvement.

## **4. Ergonomics**

The section on ergonomics defines the standard rule, the approval path, and the records that must be retained.

Requests related to ergonomics should be submitted through the official workflow rather than handled informally through chat or email alone.

When a manager grants an exception for ergonomics, the exception must include the reason, the duration, and any compensating controls.

Records related to ergonomics must be stored in the designated repository with a clear owner and retention period.

Metrics related to ergonomics should be reviewed periodically to identify recurring issues and opportunities for improvement.

## **5. Emergency Response**

The section on emergency response defines the standard rule, the approval path, and the records that must be retained.

Requests related to emergency response should be submitted through the official workflow rather than handled informally through chat or email alone.

When a manager grants an exception for emergency response, the exception must include the reason, the duration, and any compensating controls.

Records related to emergency response must be stored in the designated repository with a clear owner and retention period.

Metrics related to emergency response should be reviewed periodically to identify recurring issues and opportunities for improvement.

## **6. First Aid**

The section on first aid defines the standard rule, the approval path, and the records that must be retained.

Requests related to first aid should be submitted through the official workflow rather than handled informally through chat or email alone.

When a manager grants an exception for first aid, the exception must include the reason, the duration, and any compensating controls.

Records related to first aid must be stored in the designated repository with a clear owner and retention period.

Metrics related to first aid should be reviewed periodically to identify recurring issues and opportunities for improvement.

## **7. Incident Review**

The section on incident review defines the standard rule, the approval path, and the records that must be retained.

Requests related to incident review should be submitted through the official workflow rather than handled informally through chat or email alone.

When a manager grants an exception for incident review, the exception must include the reason, the duration, and any compensating controls.

Records related to incident review must be stored in the designated repository with a clear owner and retention period.

Metrics related to incident review should be reviewed periodically to identify recurring issues and opportunities for improvement.

## **8. Exceptions and Escalations**

Exceptions must be rare, time-bound, and approved by the designated authority named in the relevant section.

All exceptions must be logged with the approver, rationale, expiration date, and any required follow-up actions.

## **9. Document Control**
