

Remote Work Policy

Owner: People Operations | Version: 3.0-rag | Effective date: 2026-04-20

Document type	Synthetic policy manual
Use case	RAG training, retrieval benchmarking, QA evaluation
Chunking guidance	Use one chunk per section and preserve section IDs

1. Purpose and Scope

Remote Work Policy describes the formal policy requirements and operating procedures used by Northstar Analytics Ltd.. It is written as a synthetic but realistic document for training retrieval, summarization, and question-answering systems.

This document applies to all employees, interns, temporary workers, and approved contractors unless a section explicitly states otherwise.

Managers are responsible for enforcing this policy consistently and for escalating unusual cases to the document owner.

2. Roles and Responsibilities

Employees must read, understand, and follow the policy requirements relevant to their role.

Managers must document exceptions in writing and retain approvals in the designated system of record.

The document owner reviews this policy at least annually and whenever business, legal, or technical requirements materially change.

3. Eligibility

The section on eligibility defines the standard rule, the approval path, and the records that must be retained.

Requests related to eligibility should be submitted through the official workflow rather than handled informally through chat or email alone.

When a manager grants an exception for eligibility, the exception must include the reason, the duration, and any compensating controls.

Records related to eligibility must be stored in the designated repository with a clear owner and retention period.

Metrics related to eligibility should be reviewed periodically to identify recurring issues and opportunities for improvement.

4. Workstation Standards

The section on workstation standards defines the standard rule, the approval path, and the records that must be retained.

Requests related to workstation standards should be submitted through the official workflow rather than handled informally through chat or email alone.

When a manager grants an exception for workstation standards, the exception must include the reason, the duration, and any compensating controls.

Records related to workstation standards must be stored in the designated repository with a clear owner and retention period.

Metrics related to workstation standards should be reviewed periodically to identify recurring issues and opportunities for improvement.

5. Core Hours

The section on core hours defines the standard rule, the approval path, and the records that must be retained.

Requests related to core hours should be submitted through the official workflow rather than handled informally through chat or email alone.

When a manager grants an exception for core hours, the exception must include the reason, the duration, and any compensating controls.

Remote employees are expected to be reachable during core collaboration hours of 10:00 to 15:00 in their home time zone unless approved otherwise.

Outside core hours, teams may set role-specific schedules with manager approval.

6. Security For Remote Work

The section on security for remote work defines the standard rule, the approval path, and the records that must be retained.

Requests related to security for remote work should be submitted through the official workflow rather than handled informally through chat or email alone.

When a manager grants an exception for security for remote work, the exception must include the reason, the duration, and any compensating controls.

Records related to security for remote work must be stored in the designated repository with a clear owner and retention period.

Metrics related to security for remote work should be reviewed periodically to identify recurring issues and opportunities for improvement.

7. Travel While Remote

The section on travel while remote defines the standard rule, the approval path, and the records that must be retained.

Requests related to travel while remote should be submitted through the official workflow rather than handled informally through chat or email alone.

When a manager grants an exception for travel while remote, the exception must include the reason, the duration, and any compensating controls.

Records related to travel while remote must be stored in the designated repository with a clear owner and retention period.

Metrics related to travel while remote should be reviewed periodically to identify recurring issues and opportunities for improvement.

8. Exceptions and Escalations

Exceptions must be rare, time-bound, and approved by the designated authority named in the relevant section.

All exceptions must be logged with the approver, rationale, expiration date, and any required follow-up actions.
